# VostroNet

VostroNet delivers ultra-modern connected living to Essence's newest boutique four-star hotel in Brisbane

Case Study

Offering boutique spaces designed for liveability and enhanced with VostroNet Wi-Fi, the Essence Hotel is designed to be a home away from home.

Operated by Essence Hotel Group and offering special-purpose boutique apartments, the 63-room hotel at Morrow Street in Brisbane's inner suburbs is connected through VostroNet's end-to-end internet infrastructure and software.

VostroNet's Q2 hotel Wi-Fi platform allows the hotelier to easily administer the internet experience for Guests while simultaneously processing check-in and check-outs.

Additionally, the Q2 Platform grants the Essence hotel the ability to generate user analytics, including the number of each users at each location, how many devices are being used at the time and the time spent in each area. This proves to be especially useful in the conference hall and meeting rooms in the hotel, where connections may balloon up to 150.

These features provide management with useful information about hotel operations, improving their services in shared spaces - which act as hubs for wireless activity. Furthermore, management learns more about their guests, tailoring experiences and improving fundamental services.

For the Guest, VostroNet ensures connectivity during their stay is seamless and stress-free. VostroNet's wireless infrastructure allows users to connect anywhere on site, streaming subscription-based video such as Netflix or Stan to their in-room TV or travelling between their rooms to common and public areas without drop outs or the trouble of logging back in.

In parallel with Essence's goal in providing Guests with a place to call home, VostroNet delivers a level of stability, speed and connectivity that enhances Guests' hotel experience.
