

VostroNet

VostroNet has deployed its dedicated, high-speed fibre network to 275 Wickham Terrace.

Case Study

Utopia Space is a brand-new development located in Fortitude Valley, Brisbane.

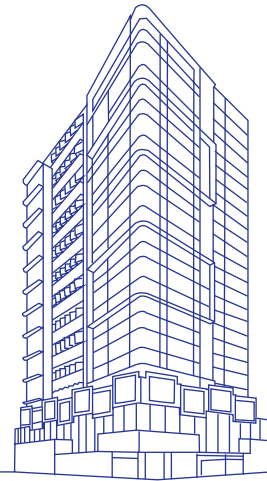

Comprising of 300 units and office spaces, the Utopia Space development is a new project by Sandt Developments in the heart of one of Brisbane's fastest-growing areas.

Unsatisfied with the NBN's proposed offering, the developer requested from VostroNet a highspeed network solution that meets the needs of residents today and is future-proof for years to come.

VostroNet's deployment to Utopia Space is a part of a much larger fibre run around Brisbane's CBD. The network provider has deployed a 10 Gbps direct fibre connection to the Utopia Space building, offering residents and guests ultra highsPEEDS and uninterrupted connection.

A key component of VostroNet's proposal was to deploy common area wireless around the development, to the gym, pool and an outdoor movie and exercise area. Residents can move around the building and seamlessly remain connected to a private network.

Complementing the network infrastructure is VostroNet's innovative Q2 software management platform.

Q2 allows residents to connect to the internet from the moment they enter their apartment. Customers can sign up with VostroNet's highspeed ISP partner, Zolt, and have access to lightning-fast speeds and affordable retail plans.

For building management, Q2 enables them to easily administer short stay accommodation guests to the network and generate useful network and user analytics to provide additional information on behaviour and trends. Likewise, the captive portal can also be customised to suit the Utopia Space branding.

Utopia Space now enjoys some of the fastest and most reliable speeds within the whole of Brisbane.
